Maintenance guideline for the strand woven bamboo material for indoor stables and arenas

The strand woven bamboo board material for indoor horse stables or arenas is made with a compressed bamboo material, normal maintenance is very important to ensure the proper lifespan of the material after installation.

The manufacturer has pre-coated the delivered material with an anti-mold coating and a layer of Tung oil treatment during the manufacturing process. The required strand woven bamboo board maintenance is quite easy but should be kept on a bi annual basis (every 6 months) as general guideline, actual wear and installation environment may require treatments more often.

General guidelines:

1. Treat the strand woven bamboo board with two coats of Land Ark Original Finish with Chemical Mildewcide additive included. Apply one coat when material is cut before installation, and one coat after installation. Please find link to Land Ark product information and follow all Land Ark Original Finish usage guidelines for application and coverage.
<http://www.heritagenaturalfinishes.com/SearchResults.asp?Cat=22>
2. After complete installation of the strand woven bamboo board and the treatment in step 1 has completely dried, please apply a third treatment of the Land Ark Original Finish with Chemical Mildewcide within 30 days to complete the absorption process.
3. Recoat on a bi-annual basis or as needed to fit your installation environment.
4. Do not use any type of Lacquer or mineral spirits, as it will remove the required anti mold and oil treatment and damage the fibers in the strand woven bamboo boards.

* Note: For exterior and other applications, please contact Equine Facility Products, LLC.
